Sai Sravan Meduri

DevOps Engineer

2099902091 | saisravanmeduri97@gmail.com

PROFESSIONAL SUMMARY:

Platform & DevOps Engineer with **8 years of experience designing and operating Kubernetes-based cloud infrastructure across AWS, GCP, and Azure**. Experienced in **Terraform-driven infrastructure automation, GitOps deployments with Argo CD, CI/CD pipeline engineering, and platform observability using Prometheus and Grafana.** Proven track record improving deployment reliability, reducing infrastructure provisioning time, and implementing scalable cloud-native systems supporting production workloads.

TECHNICAL SKILLS:

- **Cloud Platforms:** AWS (EC2, EKS, S3, Lambda), Azure (AKS, DevOps), GCP (GKE)
- **Infrastructure as Code:** Terraform, Ansible, Helm, CloudFormation
- **CI/CD & GitOps:** Jenkins, ArgoCD, GitHub Actions, Azure DevOps
- **Containers & Orchestration:** Docker, Kubernetes
- **Monitoring & Security:** Prometheus, Grafana, ELK Stack, OpenTelemetry, IAM, SOC2, Encryption
- **Programming & Scripting:** Python, Go, Bash, Groovy, YAML
- **Datastores & Streaming:** Kafka, Redis, MongoDB, PostgreSQL, Elasticsearch

PROFESSIONAL EXPERIENCE

DevOps Engineer
CareSource – Dayton, OH
Jan 2025 – Present

- Designed and managed cloud-native infrastructure across **AWS and GCP using Terraform and Helm**, reducing environment provisioning time by **~50%**.
- Managed **multi-cluster Kubernetes platform (EKS/GKE)** using **GitOps workflows with Argo CD**, enabling version-controlled deployments and reducing configuration drift across environments.
- Built and optimized **CI/CD pipelines using Jenkins and GitHub Actions**, reducing pipeline execution time by **~25%** and doubling deployment frequency.
- Designed and implemented a **platform observability stack using Prometheus, Grafana, and ELK**, enabling SLO-based monitoring and reducing incident detection time by **~30%**.
- Developed **Python and Bash automation for platform operations and deployment workflows**, reducing manual operational effort by ~35% and improving platform reliability.
- Implemented **IAM least-privilege policies, container image scanning, and encrypted secrets management** to meet healthcare security and compliance requirements.

DevOps Engineer
Tailwinds Cloud Services Pvt. Ltd. – India
Nov 2020 – July 2023

- Standardized **multi-cloud infrastructure across AWS, Azure, and GCP** using reusable Terraform modules and Helm templates, reducing infrastructure provisioning time by **~50%**.
- Designed and operated **Kubernetes platforms (EKS, AKS, GKE)** with GitOps delivery using Argo CD.
- Implemented **platform observability using Prometheus, Grafana, and OpenTelemetry**, improving production troubleshooting and root cause analysis.
- Built reusable **CI/CD templates and deployment workflows** improving release efficiency for development teams.

- Delivered an **Internal Developer Platform (IDP)** enabling self-service environments and reducing developer onboarding time by **~60%**.
- Implemented cloud security practices including IAM policy design, network segmentation, and encryption standards.

DevOps Engineer
Wishtree Eximm Pvt. Ltd. – India
April 2016 – Sep 2020

- Built and maintained **Jenkins-based CI/CD pipelines** for containerized applications, improving deployment consistency across development and staging environments.
- Automated infrastructure provisioning and configuration using **Terraform and Ansible**, reducing manual configuration effort and improving infrastructure reproducibility.
- Implemented **centralized logging and monitoring using ELK, Prometheus, and Grafana**, improving system observability and accelerating incident detection for production workloads.
- Developed **Python-based automation scripts** for log processing, operational tasks, and alert integrations, reducing manual operational workload and improving system visibility.
- Supported **hybrid infrastructure environments across on-premise systems and AWS**, contributing to containerization initiatives and early Kubernetes adoption within the engineering team.

Projects:

Smart Building Operations Intelligence MLOps Platform May 2024
University of the Pacific US
Built an end-to-end MLOps platform for smart-building telemetry that predicts equipment failure risk, estimates expected electricity and water usage and generates operational recommendations. Designed reproducible data pipelines for synthetic telemetry generation, validation, preprocessing, and feature engineering. Trained multi-model system (classification + regression) using scikit-learn and exposed inference via FastAPI. Implemented MLflow-based experiment tracking, model metadata/versioning, and drift-detection hooks to monitor feature distribution shifts and trigger retraining readiness.

Cloud Native Game Discovery Platform Dec 2024
University of the Pacific US
Built and deployed an AI-powered game discovery platform enabling semantic search using natural language queries. Designed an end-to-end data pipeline to ingest game data, generate embeddings using Vertex AI, and store them in PostgreSQL with pgvector for similarity search. Developed a FastAPI backend for vector-based retrieval and a Next.js frontend with API proxying for secure service communication. Containerized all components using Docker and deployed them on Google Kubernetes Engine (GKE), implementing Workload Identity for secure access to cloud services. Automated build and deployment using GitHub Actions, enabling a fully CI/CD-driven cloud-native system.

EDUCATION:
Master of Computer Science, University of the Pacific
Relevant Coursework: System Administration and Security, ML methods for Cybersecurity, Software Engineering in Industry 4.0 ecosystems, Fundamentals of Computer Science, Advanced Data Analytics, Database Management Systems.

Certification:

- **AWS Certified Solutions Architect – Associate**
- **HashiCorp Certified Terraform Associate**
